SUMMARY	<p>I am an informatics engineering student who has an interest in back-end developers. Skilled in building web based application and know the technique about identifying database, fundamental programming, version control system, and API management. Have experience in building website with CodeIgniter 3 and Django.</p>	
PROJECT	Sipenmaru	HERE
	<ul style="list-style-type: none">I'm a Backend Developer as well as Database Engineering. I do all the back-end part from building and managing the database, making authentication for admin, building CRUD for admin page and deploying the website.	
	Django-Game-API	HERE
	<ul style="list-style-type: none">I did everything for the back-end part from building and managing database, connect the API with JWT Token, and deployment to Heroku. All design and front-end part came from Django REST Framework. I build this API so I can learn how to make an API using Django.	
	CI3-FoodGallery	HERE
	<ul style="list-style-type: none">I did everything from design, front-end like HTML, CSS, and JavaScript, and all back-end like database, session, authentication, connecting to API, and deployment. I built this website so I can learn how to connect an API using PHP.	
	Regbeh-Bot	HERE
	<ul style="list-style-type: none">I did everything from building and managing the database, build the CRUD concept, and deployment to Heroku. I built this bot so I can learn how to make a bot using Python and Discord (message app) as platform. I built this bot so I can track all of assignments and exams from college.
